

XAMPP

XAMPP 1.7.4

1. Website Details

Download link: <http://www.apachefriends.org/en/xampp-windows.html>

Official Website: <http://www.apache.org/>

2. Installation Steps

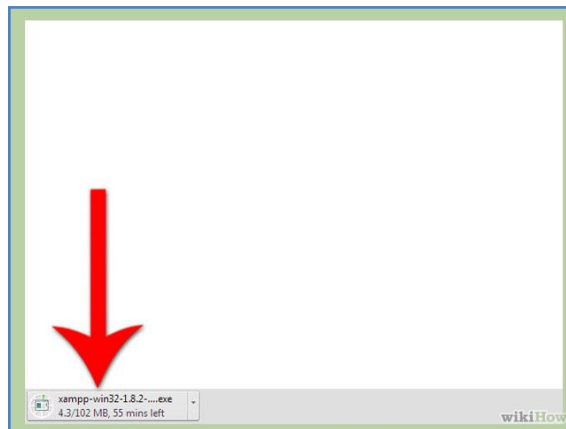

Step 1: In your web browser, go to <http://www.apachefriends.org/en/xampp-windows.html>

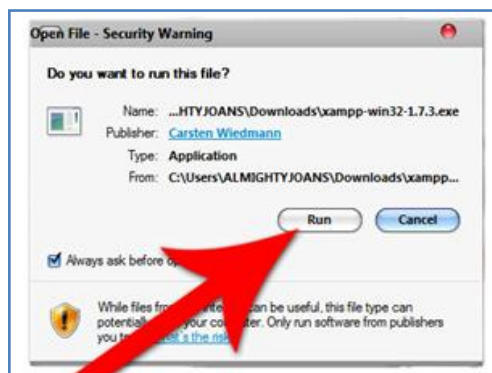

Step 2: Click on the download link for XAMPP.

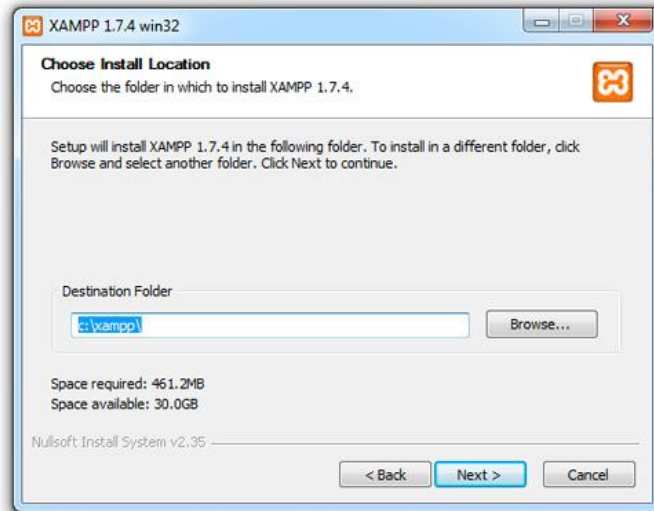

Step 3: When prompted for the download, click "Save" and wait for your download to finish.

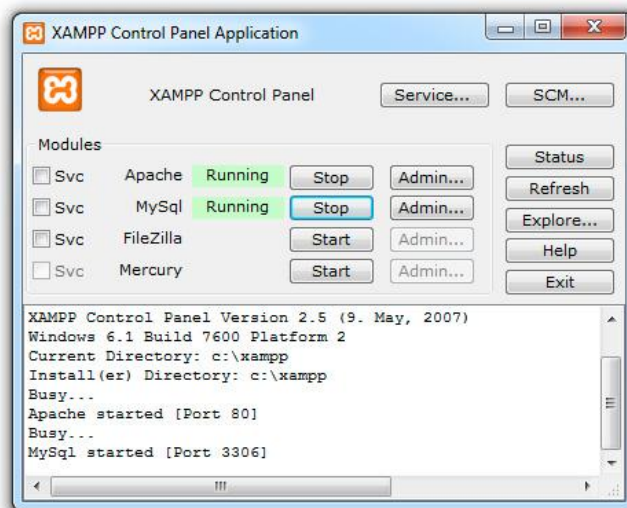

Step 4: Once your download is complete, install the program, click on "Run"

Step 5: Choose Install Location

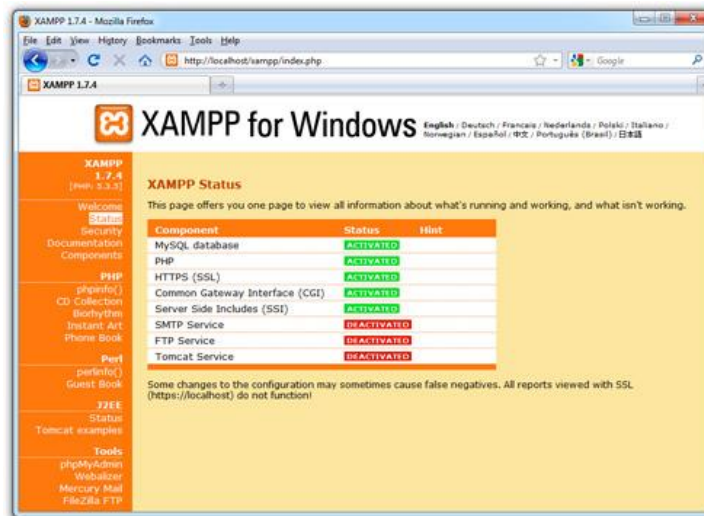

Step 6: After the installation is complete, you will find XAMPP under Start | Programs | XAMPP. You can use the XAMPP Control Panel to start/stop all servers and also install/uninstall services.

Step 7: Check the installation of XAMPP as following.

After starting of Apache (and MySQL), go to the address <http://localhost/> or <http://127.0.0.1/> in your browser and examine all of the XAMPP examples and tools.

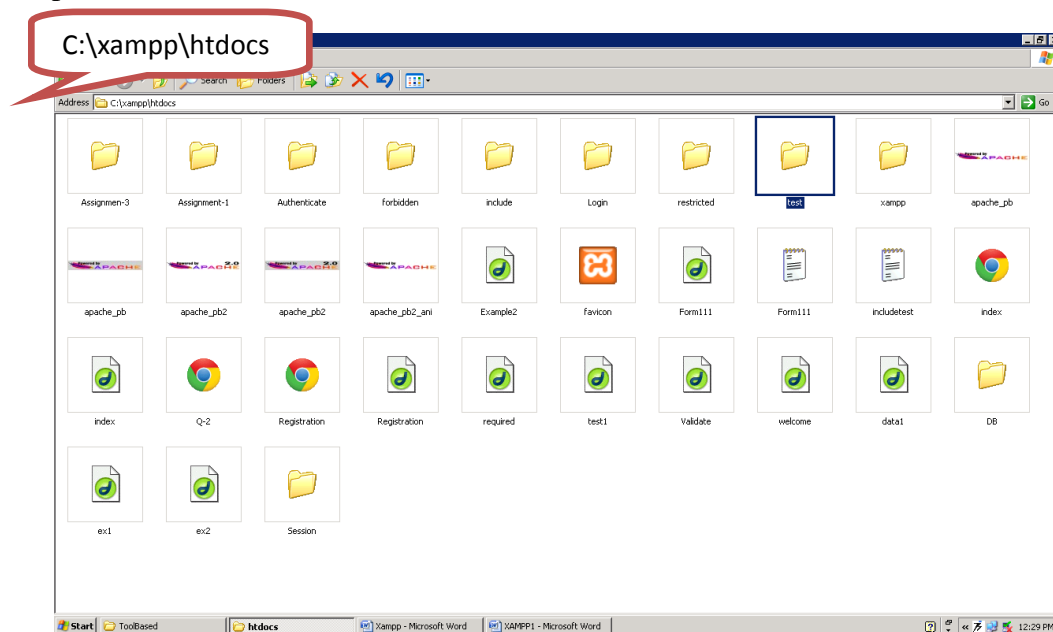

3. How to Use

- **Creating a Sample Application using XAMPP and Notepad.**

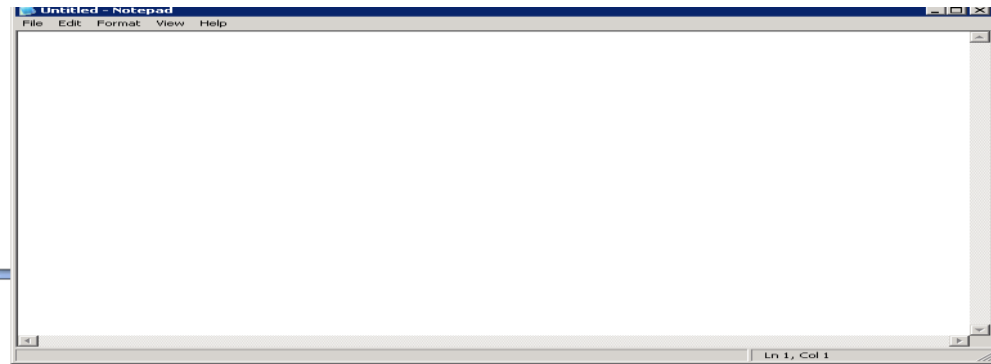

1. Create your application folder inside XAMPP/htdocs

Example:- XAMPP/htdocs/test

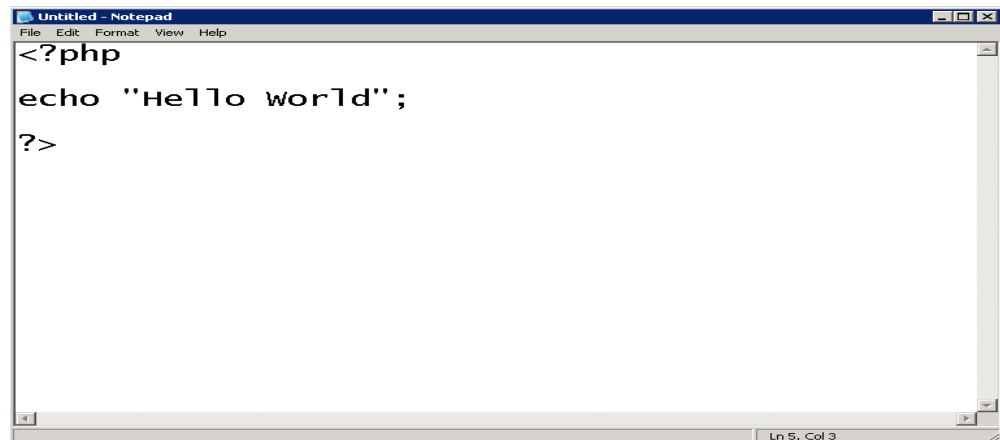

- Create your .php files inside your application folder (i.e. test) using any editor.

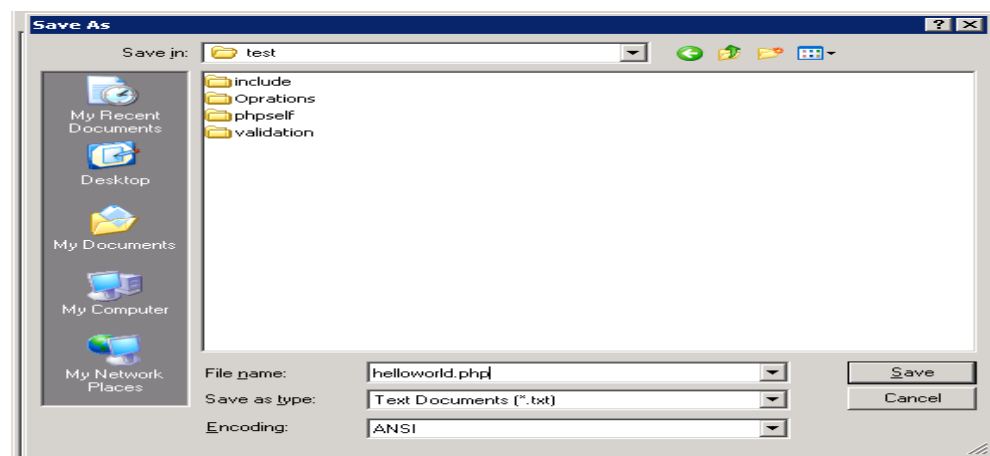

Example:- Open Notepad as an Editor to develop the sample application.

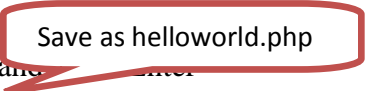

- Create a sample Hello World application using Notepad as an Editor.

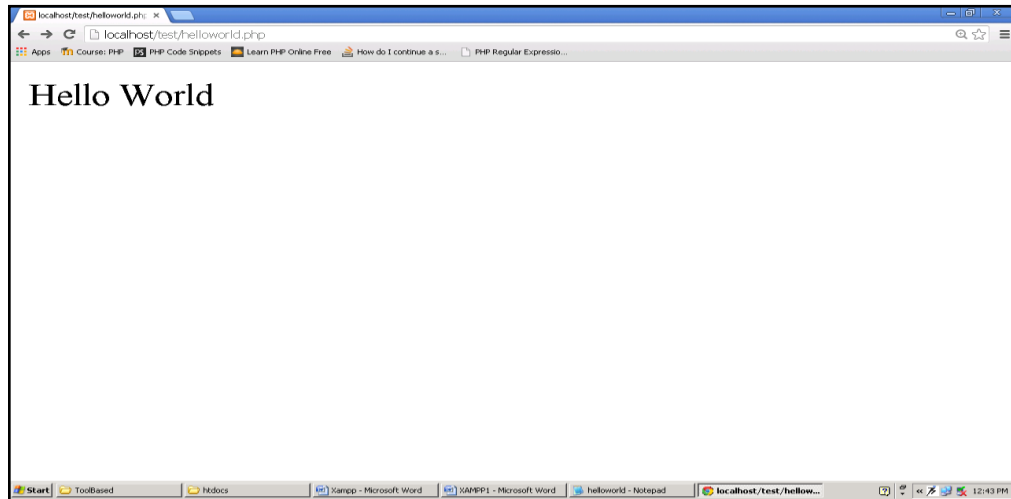

- Save it in test folder as “helloworld.php”.

- Test the output of an application

Open Browser → Typed the following URL and 

<http://localhost/test/helloworld.php>
